

GEBRAUCHSHINWEISE ENGLISCH

1. Mask the phone display on all sides with adhesive tape. This way you only polish the transparent part of the display and not the painted surfaces. 2. Apply some DISPLEX to the phone display. 3. Gently polish light scratches with a clean, soft cotton pad or cloth. 4. Repeat application as necessary for deep scratches. 5. On displays with hardened surfaces a mark can appear when removing deep scratches. Polish the entire display until the hardened layer in the masked area is completely removed. Only for use on phone displays.
